CAPSTONE 21 — AI Product Description and Ad Copy A/B Evaluation

One-page project summary • Status: AWAITING SURVEY DATA

Research question	Which AI-written ad copy performs best with real readers, and why?
Objective	Compare three prompting styles, collect genuine human preferences, and analyze results.
Fictional product	EcoSip Smart Bottle: reusable everyday bottle, for students and office workers, with water-level markings. Fictional brand.
Prompting styles	Basic; role-based; few-shot.
Ad variants	15 total: five per style.
Survey methodology	Anonymous/low-data survey; randomized or balanced ad order where practical; target ≥20 genuine volunteers.
Actual sample size	0. No survey has been conducted.
Main findings	Pending collection and analysis of genuine responses.
Winning style	Not declared; requires real responses.
Limitations	No participant data, no external verification, hypothetical product, convenience sampling expected; descriptive comparisons do not establish causality.
Conclusion	The project provides a reproducible ad library and analysis workflow. Collect at least 20 genuine responses before drawing conclusions.
